#### Notes 名诗:

- (1)Reflow soldering should not be done more than twice. If more than 24 hours between the two solderings, LED will be damaged. 回流焊次数不可以超过两次,两次回流焊的时间间隔如果超过24小时,LED可能由于吸湿而损坏。
- (2)Whensoldering, do not put stress on the LEDs during heating. <u>半焊接肽。不再在林料码块块里力压胶体表面</u>
- 3.1.1 Soldering Iron 烙铁焊接
- (1) When do soldering by hand, keep the temperature of iron below less 300 less than 3 seconds 当手工焊接时,烙铁的温度必须小于300℃,时间不可超过3秒。
- (2) Soldering by hand should be done only one time.手工焊接只可焊接一次。
- 3.1.2 Repairing

Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or not be damaged by repairing.

LED 可能力能不同的特性。

#### 3.1.3 Cautions 注意事项

The encapsulated material of the LEDs is silicone. Therefore the LEDs have a soft surface on the top of package. The pressure to the top surface will be impacted on the reliability of the LEDs. Precautions should be taken to avoid the strong pressure on the encapsulated part. So when usethe picking up nozzle, the pressure on the silicone resin should be proper. LED封装胶为硅胶,表面较软,用力按压胶体表面会影响LED可靠性,因此应有预防措施避免在按压器件,当使用吸嘴时,胶体表面的压力应是恰当的。

- (2) Components should not be mounted on warped (non coplanar) portion of PCB. After soldering, do not warp the circuit board.LED <u>灯珠不要焊接在弯曲的 PCB 场上,焊接之后,也还要变形线路。</u>板。
- (3) Do not apply mechanical force or excess vibration during the cooling process to normal temperature after soldering. Do not rapidly cool device after soldering.回流焊之后冷却过程中,不要对材料实加外力,也不要有震动,回流焊后,不要采用激剧冷却的方式。

## 4. Handling Precautions 产品使用注意事项

## 4.1 Handling Precautions 产品使用注意事项

- (1) LED operating environment and sulfur element composition cannot be over 100PPM in the LEDmating usage material. This is provided for informational purposes only and is not a warranty or endorsement.LED 工作环境及与 LED 适配的材料中硫元素及化合物成份不可超过 100PPM.这只是一个建议,不作任何品质担保。
- (2) In order to prevent ex-ternal material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM, the single content of Chlorine element required to be less than 900PPM, the total content of Bromine element and Chlorine element in the external materials of the application products is required to be less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement.为了防止外界物质进入 LED 内部以造成 LED 的损伤,所处环境及所用套件等等,单一的溴元素含量要求小于 900PPM。 第200PPM。 第200PP
- (3) VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the properties of the materials selected to be used in the construction of fixtures can help prevent these issues. Refond advises against theuse of any chemicals or materials that have been found or are suspected to have an adverse affect on device performance or reliability. To verifycompatibility, Refond recommends that all chemicals and materials be tested in the specific application and environment for which they are intended tobe used. Attaching LEDs, do not use adhesives that outgas organic vapor.

子及热的条件下,会导致 LED 变色,进而造成严重光衰,提前了解套件材料能够避免产生这些问题。 瑞丰反对使用任何对 LED 器件的性能或者可靠性有害的物质或材料。不管这些材料是已经过它区的。

- (6) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design. LED 容易因为自身的发热和环境的温度改变而改变,温度升高会降低 LED 发光效率,影响发光颜色,所以在设计时应充分考虑散热问题。
- (7) Compared to standard encapsulants, silicone is generally softer, and the surface is more likely to attract dust, requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Refond suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the package or
