Notes 8Š\ǎö;

(1)Reflow soldering should not be done more than twice. If more than 24 hours between the two solderings ,LED will be damaged. 5](cÖYfO"&v03'Ä™,,•B&™Yfæ{&™Yf5](cÖm,Pž",;©I9uSS™,,•B ?-Pžæß- & % •JkK'50"_*•\L 5Á o

(2)When soldering , do not put stress on the LEDs during heating.E2cÖLyPžæ{&v'35^RPOñ0 cšPžk=. /"•8(d••« o

3.1.1 Repairing)]•%o

Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable,a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or not be damaged by repairing.

LED5](cÖ0_&vC¾—*)]8•æ{E2Eó-â)}8•Pžæ{Eó-â(âk=/ý8âcz§ æ{•\&,'2+ÓC¾pÁ-éYüs+POD-(&v(L 5ÁRæç% m,fµF• o

3.1.2 Cautions \ǎH '2-à

(1) The encapsulated material of the LEDs is silicone. Therefore the LEDs have a soft surface on the top of package. The pressure to the top surface will be impacted on the reliability of the LEDs. Precautions should be

4. Handling Precautions 'a1w(ak=\#H '2-à

4.1 Handling Precautions 'a1w(ak=\#H '2-à

(1) LED operating environment and sulfur element composition cannot be over 100PPM in the LED mating usage material. This is provided for informational purposes only and is not a warranty or endorsement. LED B”(r h 7/ú&x - & %Ó •m, RPOn&#p»+Ëz /ú.Ê0Vfÿlí'ç&v03™,,•B 1 1 .•o0+Pý&g&jDŠ-óæ&v(r'ã(f1w™ K)B o

(2) In order to prevent external material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM, the single content of Chlorine element is required to be less than 900PPM, the total content of Bromine element and Chlorine element in the external materials of the application products is required to be less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement. &'+"ËYú8^krfÿ™ •s, - & %ÿË'Äž#lí - & % m, L (æ{J>8...h 7/úJ>k=9 'Ýv v æ{/@&gm, _f+Ëz 0Žj€'3[?-'5 1 1 .æ{/@&g[^+Ëz 0Žj€'3[?-'5 1 1 .æ{ _f+Ëz &x[^+Ëz F^0Žj€Eó-â?-'5 1 1 . •o0+Pý&g&jDŠ-óæ&v(r'ã(f1w™ K)B o

(3) VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the properties of the materials selected to be used in the construction of fixtures can help prevent these issues. Refond advises against the use of any chemicals or materials that have been found or are suspected to have an adverse affect on device performance or reliability. To verify compatibility, Refond recommends that all chemicals and materials be tested in the specific application and environment for which they are intended to be used. Attaching LEDs, do not use adhesives that outgas organic vapor. C^k=9 'Ý&#m, K!0 F•fÿ™ (^w•ó-L - & %ÿËæ{5^ž kO'ak0+Õ=©/úcšm, Rõ'Ý &tæ{(? f] - & % „æ{s•ž#lí&šj~+Õ••æ{Lç-x'+“R9 'ÝRPOñ•J8çÿ +Ý'ak0•o'H"-ÿ oi°&^/ÿ? (4) Handle the component along the side surface by using forceps or appropriate tools; Do not directly touch or Handle the silicone lens surface, it may damage the internal circuitry. ž •B(ak=•ÓE2m, B", (çRPOñ(é« 8ê0 æ{&v03 nLlyk=J[lô?:\$Xj,,?©/"•8(d••« æ{> 03•J(L 5Á,;ÿËkOš o

Fig 4-1 Cautions

- (5) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the mean while, resistors for protection should be applied, other wise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage.
- (6) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design.
- (7) Compared to standard encapsulants, silicone is generally softer, and the surface is more likely to attract dust, requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Refond suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the package or resin. Ultrasonic cleaning is not recommended. Ultrasonic cleaning may cause damage to the LED.

Table 4-1 Storage

Conditions		Temperature	Humidity	Time
Storage	Before Opening Aluminum Bag	0-30 °C	≤75%	Within 1 Year From Date
	After Opening Aluminum Bag	0-30 °C	≤60%	Recommended for use within 24 hours
Baking		60 ± 5 °C	-	124 hours

(8) If the moisture absorbent material silica gel has faded away or the LEDs have exceeded the storage time, baking treatment should be performed after unpacking and based on the following condition 60 ± 5 °C for above 24 hours.

If the package is flatulence or damaged, please notify the sales staff to assist.

(9) Similar to most Solid state devices; LEDs are sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS).

(10) Other points for attention, please refer to our relevant information.
